Launch Cloudant DB :

1. Launch Cloudant DB
2. Your Cloudant DB launches
3. Since new user a empty database is found

Create Database :

1. In order to manage a connection from a local system you must first initialise the connection by constructing a Cloudant client. We need to import the cloudant library.
2. we have to give username & apikey to build the connection with cloudant DB
Once a connection is established you can then create a database, open an existing database.
3. Then create a database as my_database.
4. Database will be created
